INCH-POUND

MIL-PRF-1/1048C 27 August 1999 SUPERSEDING MIL-E-1/1048B 5 October 1970

PERFORMANCE SPECIFICATION SHEET

ELECTRON TUBE, CATHODE RAY TYPES 5AFP1 AND 5AFP7

This specification is approved for use by all Departments and Agencies of the Department of Defense.

The requirements for acquiring the electron tube described herein shall consist of this document and the latest issue of MIL-PRF-1.

<u>DESCRIPTION</u>: Dual beam, post-accelerator, flat face, electrostatic focus and deflection.

PIN CONNECTIONS AND DIMENSIONS: See figure 1.

ABSOLUTE-RATINGS:

Parameter:	Ef	Ec1	Eb1	Eb2	Eb3	ed	Rg	Zd	Ehk	Eb3/Eb2	Alt
Unit:	v	V dc	V dc	V dc	V dc	v	Meg	Meg	V dc	Ratio	ft
Maximum: Minimum:	6.9 5.7	0, -200	1,750 	3,500 1,000 <u>1</u> /	10,500 1,000	750 	1.5 	1.0 <u>2</u> /	±180 	3.0 <u>3</u> /	50,000
Test conditions:	6.3	Adjust	Focus	2,000	4,000			1.0		2.0	

GENERAL:

Qualification: Required.

See footnotes at end of table I.

TABLE I. Testing and inspection.

				Limits		
Inspection	Method	Conditions	Symbol	Min	Max	Unit
Qualification inspection						
Base material insulating quality	1216					
Neck and bulb alignment (electrostatic types)	5101		Dia		3.31	inch
Face tilt	5101					
Cathode illumination	5216					
Barometric pressure, reduced	1002	87 mmHg <u>6</u> /				
Pressure (implosion)	1141					
Vibration	5111		Width		1	mm
Direct-interelectrode capacitance	1331	12/ k to all g1 to all D1 to D2 D3 to D4 D1 to all D2 to all D3 to all D4 to all	Ck Cg1 C1D2 C3D4 CD1 CD2 CD3 CD4	 	4.6 4.0 2.0 1.4 5.0 5.0 4.1 4.1	PF PF PF PF PF
Deflection-factor uniformity	5248	1D2 3D4			2 3	% %
Interaction factor	5250				14 x 10 ⁻⁶	Inch/V dc
Magnetization	5256			•••		
Conformation inspection part 1						
Voltage breakdown	5201					
Voltage breakdown (electrostatic types)	5201					
Gas "cross"	5206	lb3 = 50 μA dc <u>5</u> /				
Modulation	5223	lb3 = 25 μA dc	ΔEc1		35	V dc
Spot position (electrostatic deflection)	5231			***	15	mm
Spot displacement (leakage)	5231		Displ		10	mm
Grid cutoff voltage	5241		Eco	-45	-75	V dc
Tracking		<u>9</u> /			1.5	%
Useful scan		1D2 <u>10</u> / 3D4 <u>10</u> /			4 4	inch inch

See footnotes at end of table.

TABLE I. Testing and inspection - Continued.

	1		l			1
Inspection	Method	Conditions	Symbol	Limits I		Unit
Пороскоп	Widaiod	Conditions		Min	Max	
Conformance inspection. part 1 - Continued						
Pattern distortion	5103	<u>11</u> /			2	%
Grid No. 1 leakage current	5251					
Anode No. 1 leakage current	5251		ib1		3	μA dc
Anode No. 2 leakage current	5251					
Light output (P1)	5221	lb3 = 25 μA dc <u>5</u> /	Light	20	•••	fL
Conformance inspection. part 2						
Heater current	1301		If	540	660	mA
Electrode currents (Anode No. 1)	5201		lb1	-10	5	μA dc
Electrode current (cathode)	5201	lb3 = 50 μA dc	lk		600	μA dc
Base alignment (electrostatic types)	5101	+3D4, base key, collar index pin				
Collar base alignment		+3D4, collar index pin			10	Degrees
Side terminal and base alignment	5101	Base key, collar index pin				
Side terminal alignment (electrostatic types)	5101	+3D4				
Neck and base alignment (electrostatic types)	5101					
Screen (P7)	5221	<u>5</u> /				
Line width B (electrostatic deflection)	5226	lb3 = 25 μA dc	Width		0.69	mm
Focusing voltage at modulation condition	5246		Eb1		610	V dc
Angle between traces	5101			89	91	Degrees
Bulb, screen, and faceplate quality	5106					
Trace alignment (gun to gun)		Z/				
Stray light emission (conventional types)	5216	Eb2 = 3,500 V dc; Eb3 = 10,500 V dc				

See footnotes at end of table.

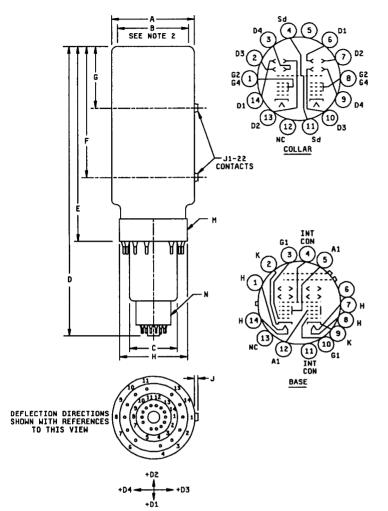

TABLE I. Testing and inspection - Continued.

				Limits]
Inspection	Method	Conditions	Symbol	Min	Max	Unit
Conformance inspectionpart 2 - Continued						
Line width A (electrostatic deflection)	5226	lb3 = 25 μA dc	Width		0.65	mm
Focusing voltage at cutoff	5246		Eb1	•••	610	V dc
Deflection factor	5248	1D2 <u>8</u> /	DF	54	66	V dc/inch
Deflection factor	5248	3D4 <u>8</u> /	DF	43	53	V dc/inch
Deflection factor	5248	1D2; Eb3 = Eb2 = 2,000 V dc	DF	43	55	V dc/inch
Deflection factor	5248	3D4; Eb3 = Eb2 = 2,000 V dc	DF	36	44	V dc/inch
Heater-cathode leakage current	5251		lhk		15	μA dc
Secureness of base, cap, or insert	1101					
Base pin solder depth	1111					
Permanence of marking	1105				***	
Conformance inspection, _part 3						
Life-test provisions		Group C; t = 500 hours (min); lb3 = 25 μA dc; Eb2 = 3,500 V dc; Eb3 = 10,500 V dc				
Life-test end points		lb3 = 18.75 µA dc Modulation Line width A Line width B Grid No. 1 leakage Anode No. 2 leakage Heater-cathode leakage Anode No. 1 leakage Stray emission	ΔEc Width Width 	 	35 0.65 0.75 	V dc mm mm

See footnotes at top of next page.

TABLE I. Testing and inspection - Continued.

- Accelerator average power input shall be limited to 6 watts. Grid No. 4 and grid No. 2 are connected internally and referred to herein as accelerator. This shield and the accelerator electrodes should be connected together under normal operating and test conditions. However, the accelerator as well as the first ring of the post-deflection accelerating system may be operated at slightly different potentials for astigmatism control if desired and the shield potential should then be adjusted for optimum performance.
- 2/ Deflection electrode circuit resistances should be equal. Higher resistance values up to 5.0 megohms may be used for low-beam current operation.
- 3/ This tube is designed for optimum performance when operating at an Eb3/Eb2 ratio of 2.0. Operation at other ratios of Eb3/Eb2 may result in changes in deflection uniformity, pattern distortion, and tracking.
- 4/ All tests except capacitance, vibration, tracking, cathode illumination, stray emission, and interaction factor shall be made on each unit separately. Each deflection plate shall be connected to A2 through a resistance of 1 megohm.
- 5/ This test to be performed at the conclusion of the holding period.
- 6/ Maximum potentials applied to base, deflection plates, and A2 only.
- 7/ Corresponding traces of each unit shall be within 1° of each other.
- 8/ The ratio of the deflection factors of corresponding deflection electrodes shall not exceed 1.15.
- 9/ The focused spots of both guns shall be moved by means of a common dc voltage along the 1D2 axis until the spot of gun A is at ± 1 inch from the geometrical center of the tracking area. Then by means of a small correction voltage, the spot of gun B shall be moved to the same distance. The spots then shall be moved by means of the common dc voltage in the opposite direction from the geometrical center until the spot of the less sensitive gun reaches -1 inch. The difference in deflection factor of the more sensitive gun is then compensated for by moving its spot back to -1 inch by means of a voltage divider. This entire procedure is to be duplicated along the 3D4 axis. Then by means of the two common dc voltages, the spots shall be tracked over the entire tracking area, a 4-inch diameter circle centered with respect to the tube face center, and the greatest distance between the spots shall not exceed the limit specified.
- 10/ Centered with respect to the tube face and with the tube shielded.
- 11/ With a raster pattern, adjusted so its widest points just touch the sides of a 3.060-inch square, will fall within the area bounded by the 3.060-inch square and an inscribed 2.940-inch square.
- 12/ All other electrodes contained within the envelope are to be tied together.

		nsions						
Ltr	Inch	es	Millimeters					
	Min	Max	Min	Max				
Conformance inspection, part 2								
Α	5.16	5.37	130.97	135.73
